

AG Workflow Tracker – Order Tracker 2 – Install Guide.

1. Login to PC as Windows user that will use Order Tracker. Avoid using a special Admin account
2. Extract all contents of ZIP file into a Local folder, example **c:\OrderTracker** (preferred due to AV)
3. Install **../components/ owc11.exe**
4. Install **../components / 01_owc2007sp1-kb937961.exe**
5. Install **../components / 02_office2007-kb947318.exe**
6. Create shortcut of **WF_Loader.exe**, rename as **OrderTracker** and place on desktop, Taskbar or other convenient location, this is the file to use for startup
7. Start from **Shortcut** or **WF_Loader.exe**. If you see a screen that looks like this,

shortly followed by this; Then all is fine and installation for most users is finished.

8. If you get a warning about missing dot net framework, ask your Manager or IT Dept. to install **MS .NET Framework 4.0 or higher** on this PC, you need administrator rights on the machine to do this.

9. **Optional:** If this is a PC where scanned Driver Runsheets will be uploaded to the system, then extract and install ../components/**qsbarsdk.zip** as well. Contact support if you do not have this file. This is the Barcode reader engine that can extract signatures & data out of driver run sheets. This component is ONLY required if you will be uploading scanned driver run sheets from this station. For most stations this component is not needed.
10. Configure and Customize settings, go to **User Settings** - Configuration section in this manual.
11. Order Tracker requires Windows 7, 8, 10 or 11. Mac OS is only supported over Software like Parallels or accessing OT via Windows Terminal Server. There is no version for native Mac OS.
12. PDF Files: Forms in OT are in PDF Format. The PC should have a default application that can open PDF files. Acrobat Professional is not required. Free Acrobat Reader is fine. Alternatives are Foxit PDF Reader or PDF-XChange free version.
13. If errors or application crashes happen, the log file is called <**workflow.log**> and is located inside the application directory. Contact support with description of problem, screenshot and log file.

AG Workflow Tracker – Order Tracker 2 - Overview

Startup

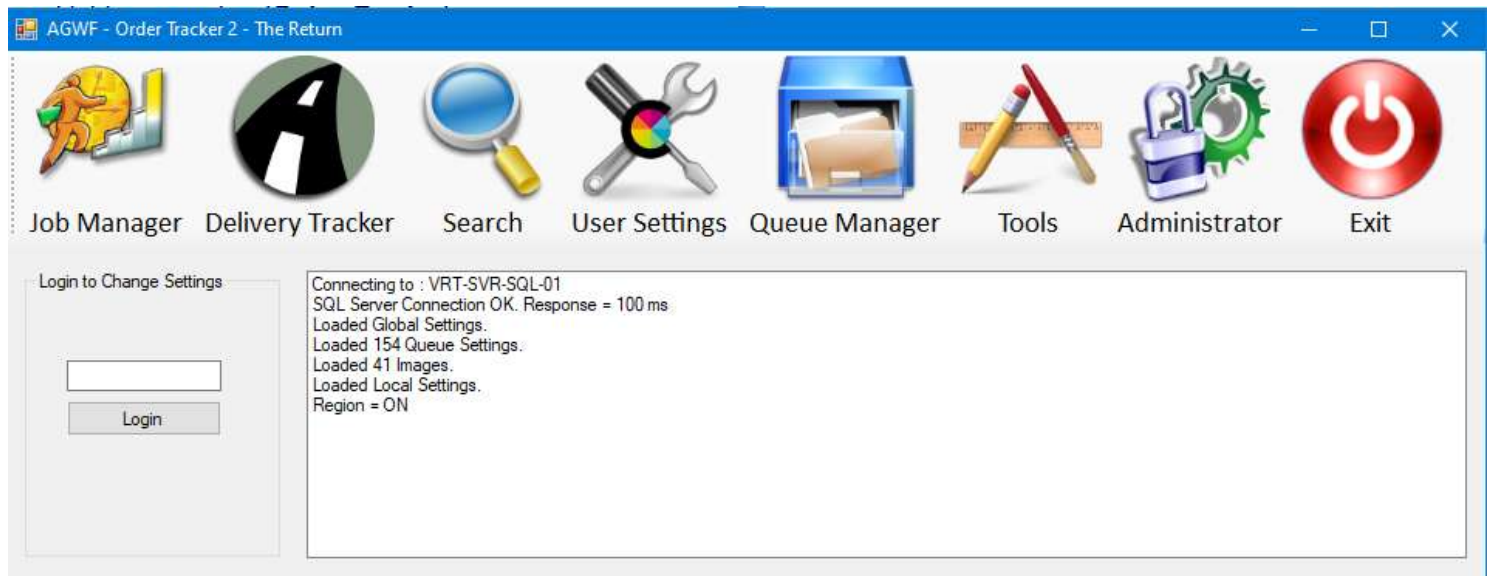

Startup screen consists of 2 parts, the first one is a “Loader” that will check server if any newer version is available and download latest version if required.

Wait until main startup screen is displayed.

Main Startup Screen

Watch the text area for any possible warnings or error messages and take action as needed.

Login is not required for regular use

Main Menu Items :

Job Manager

Contains main working form, displays relevant queues (treeview top left) and jobs part of these queues (top right) as well as a job editor area (bottom). This is the area to create new, modify existing active jobs or to review what is happening in the different queues overall.

OT works with queues. Jobs are always part of a queue and can be transferred via Drag & Drop from one queue to another. Example Production > Dispatch

To configure queues for access, you must go into “User Settings” and select “Accessible” Queues.

Delivery Tracker Screen

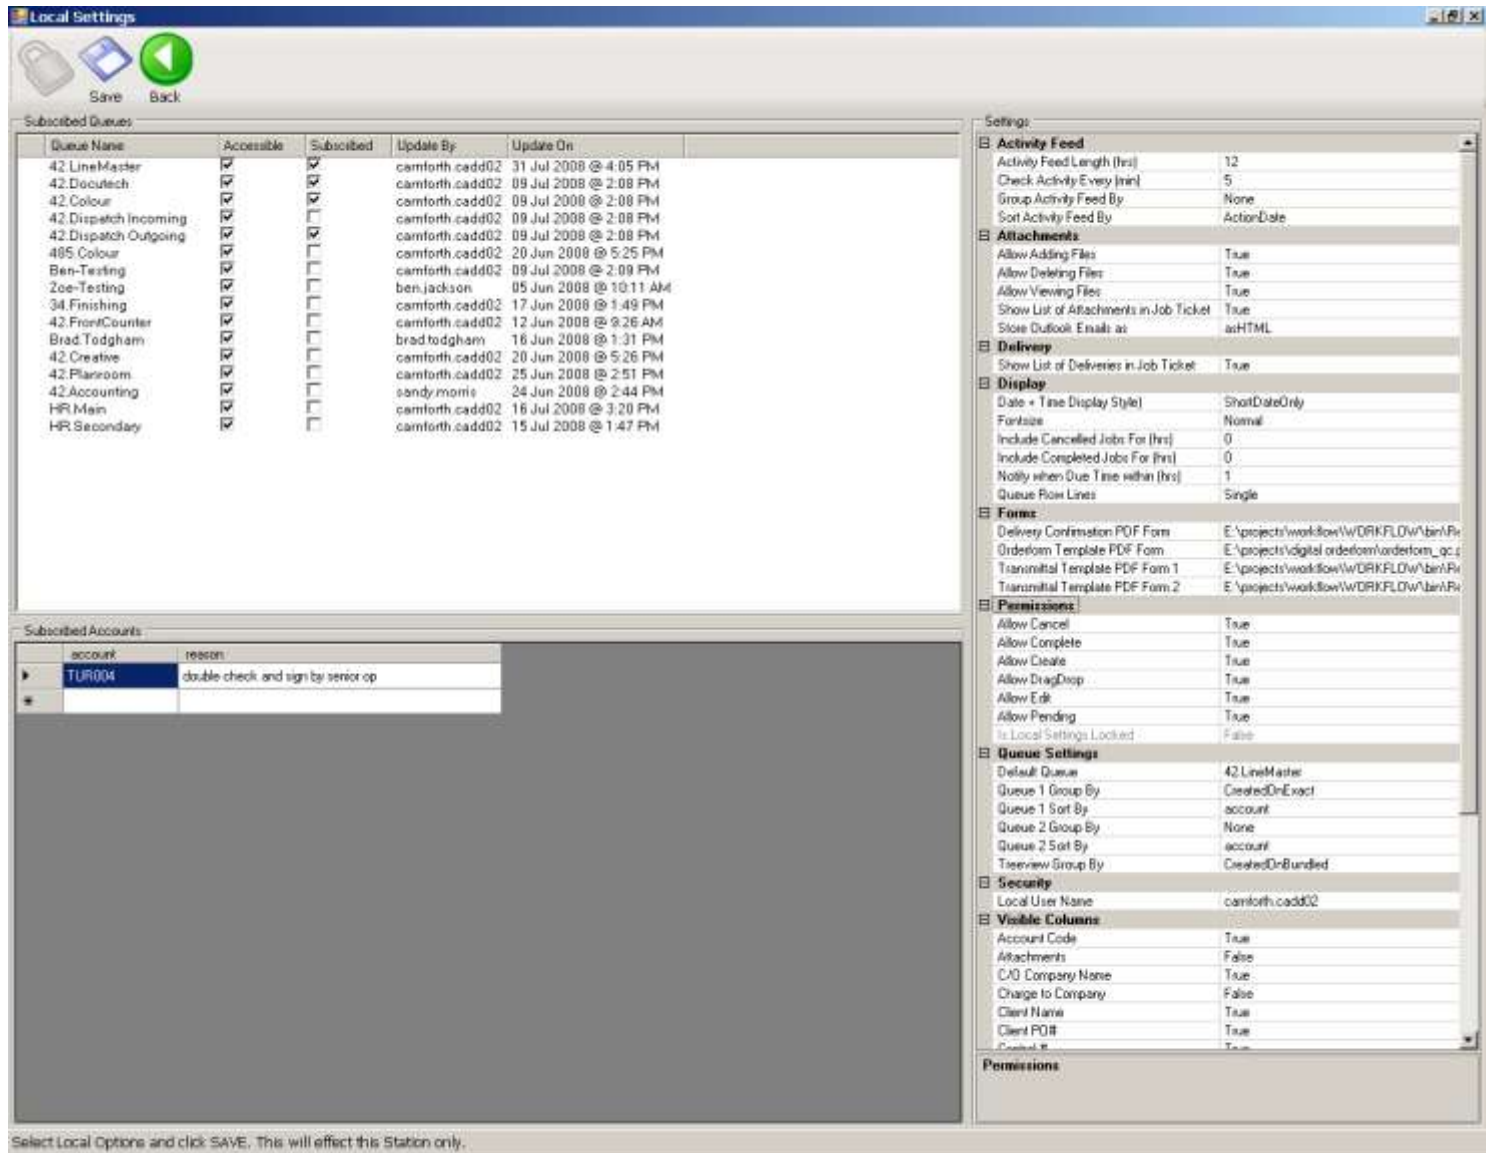

User Settings – Local Configuration

This screen has configuration settings and preferences that will affect **this station only**.

Job Manager will only allow access to queues that are chosen as ‘**Accessible**’ in this screen.

Delivery Tracker will include upcoming orders from ‘**Subscribed**’ queues. This is optional.

“Subscribed Accounts” at bottom left will give those orders a bold text to draw attention, in the Main Job Queue, on this station **only**. This is optional. Another “Reminder” function exists that allows configuration of global Reminders for all Stations.

Permissions

Select Local Options and click SAVE. This will effect this Station only.

Queue Manager (Key Operators only)

Use this screen to configure general settings that will apply to **all users of that Queue**, key operator password is required to access this screen. Usually a Branch Manager or Administrator will adjust these settings when a new queue is setup or as required and user will not have to go into this screen.

Queues have many properties that apply to all Jobs within this queue that can be configured. Example workflow tags like "Proof" Tags or notification Emails when new jobs enter this Queue.

☒ Many Other Options

Loaded 32 Items

Quickstart – Enter New Order

Goto Job Manager, ensure a suitable queue is selected in Treeview. Job will be placed into this queue.

Click “CLEAR” (right corner) in Job Detail Editor area (bottom). – After entering each field confirm entry with “Enter” key or “Tab”. The account code can be looked up by double click on “Account Code”

Enter Account Code, system will autocomplete based on most common used accounts for that queue.

Enter “Care Of”, if any, system will autocomplete if required based on the chosen account code.

Enter Client Name, system will autocomplete with client names from previous orders for this account.

Validate Due Date/Time, system will suggest time based on queue defaults.

Leave Control # blank. System will create a new one.

Enter Job Name (mandatory).

Enter PO Number if provided (purchase order). System will warn if account code is tagged ‘must have po’ and this field is left blank. If this label is red, po number is mandatory for this account or they will not pay.

Select Sourcechannel from dropdown. This defines the method the order was initiated.

Enter production notes

Click “NEW” when finished. Job ID will be displayed in right corner of editor and the control number will be assigned.

Optional Items :

Add “**Tags**” to order to draw attention to certain items. Dispatch will see these tags as well. Some of these tags are special and will show up in the driver run sheets. For example the “Delivery Confirmation Req” Tag is special as it will place a reminder on the driver run sheet warning him that he must get a signature from the client. Other special Tags are “Critical Timing”, “Attention”, “Direct Drive”

Add “**Comments**” if you want to store information about a particular action at this point in time, comments are stored in Order History with Date & Time & Station, unlike Notes which get updated anytime someone makes changes, comments are always stored as a new entry, never deleted. Use this to track progress in time when multiday orders are worked on.

Quickstart - Adding Transmittals

Start with a new or existing order. Click on [Transmittals] Tab in Job Detail Editor. There are 6 methods a transmittal can be added.

- 1- Click on **“ADD”** and start typing a few letters of the destination company name into the blank dropdown, the program will suggest any matching names, hit enter when done or browse this list and select.
- 2- Click **“Browse to PDF file”** and point to the transmittal file for this order, accepted file formats are TIF and PDF. If you have word documents are anything else use Adobe Professional to create a PDF first. **** see note**
- 3- Simply Drag & Drop a PDF or TIF file into the transmittal area. **** see note**
- 4- Click **“Add from Address Book”** if the location does not exist in the main dropdown. Within the address book you can;
 - A- Search the complete database for an address, enter search criteria at left and click **search**, double click a result to accept or right click to view a map of that area.
 - B- Type a brand new address into the criteria area and click **‘select above’** – **you should make sure the address you enter does not exist already – do a search by postal code or street name first – this will avoid entering duplicates into the database**
 - C- Select an address from the **“Ship To”** List for this company, this is the same list as in the main Add Button
- 5- Click **Fill out PDF Form** if you want to fill out the transmittal template by typing any address using Adobe Professional (required, reader will not work) – the program will populate known fields for you, save and exit Adobe when done, you should see a new transmittal entry now. **** see note**
- 6- **(ADVANCED)** If you have lots of addresses you can import many address in one operation using an XLS template, see file **“Trans_Template.xls”** in the installation folder of the program, contact the administrator if you do not have this file. Fill it out as per the columns and click **“Add from XLS Template”** the program will read the XLS and create all required address entries.

Set Individual Due Date & Time & Contact Name, Notes

For any transmittal you can define a different Due Date and Time, Contact name and Notes. The notes field is optional but if used should contain what part of the order goes to this location – this is useful when you have a large order with different number of items going to different places. This information will print on the transmittals note field. Simply **select** a transmittal (highlight) and **double click** an area to change.

**** Note** : When adding Transmittals this way the address area will **not** be linked to any record in the database. In order to link this transmittal to a known address **double click** on the **‘not selected’** text and select the correct entry from the ship to list or create a new entry if it does not exist in the address book. This step is important, as it will affect dispatch heads up information as well as integration into billing.

Repeat the above for all transmittals and click **SAVE** when done.

Working with Transmittals

Before you can view or print transmittals the order must be **saved**. The program will assign a unique **Delivery ID #** to each transmittal during this save.

To view or print a transmittal simply double click the Filename / ID column, the result will depend on the active template for 'digital' transmittals (created via selecting and existing address)

Transmittals that have been added via drag & drop (example : faxed / scanned pages from clients) will have the critical information (delivery ID, Barcode, Due time embedded at the top)

To delete a transmittal, select the line and click on the delete key on the keyboard

The screenshot shows a software application window with a toolbar at the top and a sidebar on the left containing 'Bookmarks', 'Signatures', 'Pages', 'Model Tree', and 'Attachments'. The main content area displays a 'Packing Slip' form for 'Astley-Gilbert'. The form includes a logo, a barcode, and fields for 'Delivery #', 'Control #', and 'Due Date'. Below these are fields for 'Company Name', 'Attention', 'Address', 'City', 'Province', and 'Postal Code'. There is a 'Notes' section and a 'Sender' section with fields for 'Name' and 'Phone'. At the bottom, there is a table of office locations and phone numbers.

Office	Address	Phone
HEAD OFFICE	42 Camforth Road, Toronto, Ontario M4A 2K7	416.386.8666
CENTRAL	477 Mt. Pleasant Road, Suite 105, Toronto, ON M4S 2L9	416.485.6300
DOWNTOWN	485 Wellington St. West, Toronto, ON M5V 1E9	416.348.0002
NORTH EAST	3005 Town Centre Blvd., Suite 104, Markham, ON L3R 8G5	905.470.7881
WEST	5160 Explorer Drive, Unit 25-26, Mississauga, ON L4W 4T7	905.624.5500
DOWNTOWN	60 Bloor Street West, Suite 203, Toronto, ON M4W 3B8	416.924.9634
NORTH WEST	8000 Jane Street, Building C, Unit 15-16, Vaughan, On L4K 5B8	905.738.3332

The **DELIVERY #** is the critical information that has to be entered into Delivery Tracker when drivers are leaving. Eventually when all shops have barcode scanners the program will read all required information out of the barcode and no manual typing entry will be required for drivers.

IMPORTANT RULE : In Delivery Tracker :

Use **Delivery #** when working with a **Transmittal** and shipping to a **3rd party** delivery.

Use **Control #** when shipping to the **Sender /Client** that is mentioned on the Orderform. This is also called a Packing Slip.

Overview – Working with Attachments

The program can carry **file attachments** in a very efficient way together with the order.

What its for :

Add production and client instructions, communications, quotes to the order – anything that you would normally add to the back of the orderform in paper form should be stored here, eventually all paperbacks that are currently stored in boxes will be discarded and these attached digital documents will be used when any retrieving or archiving needs to be done – all of the above items will be stored on a PERMANENT basis in a large file vault on the server.

You can add production CONTENT (the actual files needed to produce the job) for a limited amount of time (couple of days, maybe a week or two – depending on job type).

The program can manage files better than EMAIL and better than “Shared” or “Interbranch” because;

Attaching & forwarding an email to one or more persons creates duplicates of the original files on the mail server, slowing it down – do not send large files internally through email. Attach the required files to the Job

Copying files into a location in Shared or Interbranch requires ;

A) the receiving party to be informed where the files are

B) the files to be deleted when the job is done – this usually gets forgotten leaving many unknown files behind –

The program keeps all files with the order (no need to search for any shared folder or interbranch, no risk of grabbing the wrong files)

The program sets and **EXPIRY** date for production content type files, which can be determined by an administrator per queue – expired files will be automatically deleted by the system administrator

The program keeps track of who uploaded what files and what time. We have a full history with timestamps, in case detailed tracing is required

The program works faster than outlook / email or copying from shared folders over the network / across branches because it carries only **links** to the actual files when someone opens an order, it never touches the original file (actual data) in the file vault unless a download / full access is requested by the user.

What its NOT for :

This feature is **NOT** intended to replace Daily Print Queues or Main Archiving folders, any production content files should only be attached if you intend to transfer them to a different department or branch or when multiple persons need to access the same files.

Examples –

- 1- Transferring a Linemaster order from AG477 to AG42 for printing, it would **NOT** be worth to add these files as production content to the system – the existing system of stationlink & incoming queues is fully sufficient and very efficient in getting this task done.
- 2- Small and Large format PDF documents from AG485 for printing at AG42 – after quoting, some printing to be done in colour dept / IGEN, some printing in outdoor graphics and some on offset – eventually the complete order will be put together in 42 fulfillment. This order is a much better candidate for adding production content because many departments and most likely some coordinators will need access to the files. Create suitable ZIP / PDF files, name them accordingly and add them as attachments to the system – check default expiry date by system, ensure that it is long enough, adjust as required.

Quickstart – Working with Attachments

Start with an existing or new order, Click on '**Attachments**' Tab

Available Commands :

Add – Browse to desired file to be attached, PDF, ZIP, TIF (will be converted to PDF internally) formats are supported, Adding files can be done via simple **drag & drop** as well, you can drop more than 1 file at a time

To store Emails from **Webmail (browser based) – No Order Details initiated**:
open the webmail message and click 'forward' or "reply", (this is to capture the sender)
select / highlight the message text (**CTRL+A**)
drag & drop the message text into the attachment area
This method does not capture the order header. It only stores the selected message.

To store Emails from **Webmail – with Order Details initiated**:
Open the webmail message and click 'forward' or "reply", (this is to capture the sender)
Select / highlight the message text (**CTRL+A**) and copy to Clipboard (**Ctrl+C**)
Click on "Paste Webmail" – this will populate empty fields in "General Details" and capture the message that initiated the order.

To store emails from **Outlook (NOT Webmail)**
Highlight the message in Outlook
Drag & drop the message from Outlook into the "**Outlook Email Dropzone**" area

View a file – Double click its filename.

Download – highlight desired one or more items, click download and select a target folder.

Remove - highlight files to be deleted and click remove.

Double click on an expiry date if you want to change its value.

Configuration – Local Settings (this station only)

Permissions

Select Local Options and click SAVE. This will effect this Station only.

Changes in this screen will affect **this station only**. After a new install you must select some defaults before the program can be used.

The critical ones are

ACCESSIBLE Queues (checkboxes)

Delete all checkboxes. Save.

Select checkboxes in the sequence you want them to appear in the Job Manager. Save.

Include queues that you want to work with yourself and that you want to transfer jobs to.

QUEUE Settings:

Define the Queue that this station works with most often (Working Queue) and the queue where most jobs are transferred to (Transfer Queue)

▼ Queue Settings	
Default Transfer Queue	38.LineMaster
Default Working Queue	38.LineMaster

You may have to save, exit the user settings screen and reenter if you do not see the queue names you are looking for.

SUBSCRIBED QUEUES

This allows to see more than 1 queue's contents at the same time in the Job Manager.

If you are configuring a Dispatch station or want to get "heads up" about any upcoming orders, select (checkmark) '**subscribed**' for any queue that you want to be notified about.

This information will flow into the Dispatcher "Upcoming orders" area in Delivery Tracker.

The rest of the settings are optional and you can configure them to suit your needs

The Delivery tracker has many features that will directly affect drivers; the main ones are ;

Tracking of **Control #** when shipping to **Sender or CareOf** as mentioned on Orderform. (Packing Slip)

Tracking of **Delivery #** when shipping to a **3rd Party/ Transmittal**.

Tracking of (items/products) that are shipping with the order.

Barcode reader enabled capturing of data.

All **Run Sheets** can be created and printed by the program, no hand writing required

Warnings when order is close to/past due time or when parts of order are still pending (stop signs)

Information where each driver is, at which Branch or On delivery, along with Trip times.

Information about **upcoming orders** from subscribed queues and other branches. If used correctly these will allow for better planning ahead of bundling deliveries and better scheduled runs.

Quickstart – Delivery Tracker – for Drivers

Record a New delivery before leaving (mandatory)

Click “**Clear**” in case there is any old data from a previous driver / run, this will also initialize the barcode reader if you branch has one. The same task can be accomplished by either a manual data entry similar to the old delivery tracker, or via the help of a barcode reader, currently available at AG42 and hopefully soon at the branches

Via Manual Entry – Steps

- 1- Select your **Driver Number / Name** from the dropdown
- 2- Select **Destination**
- 3- Enter **tracking number** and press ‘enter’
(start with **C** for control number, start with **T** for Transmittal(Delivery) #)
Examples : c123456....t21444
a number starting with C means you are shipping to the location or care of mentioned on the orderform. This is created via Packing Slip in the Job Manager.
a number starting with T means you are shipping to a 3rd party / transmittal
- 4- Check database response, you should see the shipping location and any possible warnings, if you see an incorrect shipping location (ie the address of the package in your hand does not match the database response, something is wrong and needs to be checked, inform dispatcher)
- 5- Optional but strongly recommended, enter **product / item codes and quantity**, use codes on main products chart, example “+3RF” > will add 3 Fullsize Rolls shipping with the above order.
This entry always has the format of + (plus sign) then a number (quantity), then a product code (usually 2 letters), no spaces. This part is automated via Barcode scanner chart – manual entry is not required.
- 6- If you make any **mistakes** highlight the incorrect line and click ‘**delete**’ on the keyboard
- 7- **Repeat** the above for all orders starting at **step 3**
- 8- When finished with all items click “**LEAVE**” – **CRITICAL**
- 9- **This will create a fully completed RUN SHEET, Print out and take with you for client signatures, close/minimize Adobe Acrobat**
- 10-**Optional** – If you need a map of a particular delivery location, highlight the Control # or Delivery # and click on “**MAP**” (internet access required)

Via Barcode Reader - Steps

- 1- Click **“CLEAR”** to prepare the Barcode Reader
- 2- **Scan the Control or Delivery # Barcode on the Package, Roll or Envelope** (the reader will beep with a short high pitch sounds if it reads successfully, a green light on the read will flash briefly)
- 3- Check database response, you should see the shipping location and any possible warnings, if you see an incorrect shipping location (ie the address of the package in your hand does not match the database response, something is wrong and needs to be checked, inform dispatcher)
- 4- **Scan the Product Code & Quantity** from the main product chart, repeat for any number of products that are part of the same order. (example; 3 Rolls Fullsize, 1 Halfsize Roll, 2 Envelopes, 1 CD, 1 Box etc)
- 5- If you make any **mistakes** scan **“Cancel Last”** Command on Product chart at bottom, or optionally highlight the incorrect line and click **‘delete’** on the keyboard.
- 6- **Repeat** the above for all orders starting at **step 2**
- 7- When finished with all items click **“LEAVE” – CRITICAL**
- 8- **This will create a fully completed RUN SHEET, Print out and take with you for client signatures, close/minimize Adobe Acrobat**

Drivers - When Returning to any Branch (mandatory)

- 1- Select your **Driver Number / Name** from the dropdown
- 2- Ensure the Branch shown on screen is the Branch you just arrived
- 3- **Click on “RETURN” – this is critical in order to keep Dispatch Info up to date at all branches.**

Adding a new (manual) entry to an EXISTING run sheet :

Sometimes drivers may wish to add a single delivery to an existing run sheet that was printed previously by the system, especially if they are doing frequent runs with 1-2 orders only and the log sheet still has empty space.

Click on **“Add Single”** and follow the on screen instructions to do this.

Doing this option allows the system to locate and identify the individual client signature when it is requested, even if all entries on this line are written by hand.

Quickstart – Delivery Tracker – for Dispatcher

View Upcoming Orders :

Grouped by Source of Order

Possible Sources are

- 1- Dedicated Dispatch Outgoing Queue
- 2- Any Subscribed Production Queues (controlled in User Settings)
- 3- Interbranch Incoming
- 4- Interbranch Arrived and pending next delivery

Grouped By Time Range – Due Time

Grouped By Delivery Zone (first 3 letters of postal code make major delivery zones in GTA area)

Select Desired “**Lookahead**” Time – orders past due will display for a certain amount of time and will eventually disappear

Watch for **warning signs & tags** to identify critical orders.

Double click an order will allow access to full order **details** & history.

Orders in **red** are close to or past their due time.

Highlight an order and click on “**MAP**” to view a map of that area.

Driver Status :

If a driver is not available any particular day anymore (gone home or absent), select his name and click 'delete' on the keyboard – the same driver will start showing up on the lists again when he signs in or out.

Double click a driver name in **"Driver Status"** panel to see their daily run information, trip times and idle times, which orders they delivered, this screen also allows access to signed Log sheets for this driver only if there are available.
